

**WHAT IS CLAIMED IS:**

- Sub A* 1. An isolated nucleic acid comprising a member selected from the group consisting of:
- 5 (a) a polynucleotide having at least 75% sequence identity, as determined by the GAP algorithm under default parameters, to a polynucleotide of SEQ ID NO: 1;
- (b) a polynucleotide encoding a polypeptide of SEQ ID NO: 2;
- (c) a polynucleotide amplified from a nucleic acid library using primers which 10 selectively hybridize, under stringent hybridization conditions, to loci within a polynucleotide of SEQ ID NO: 1;
- (d) a polynucleotide which selectively hybridizes, under stringent hybridization conditions and a wash in 0.1X SSC at about 60 to 65°C, to a polynucleotide of SEQ ID NO: 1;
- (e) a polynucleotide of SEQ ID NO: 1;
- (f) a polynucleotide which is complementary to a polynucleotide of (a), (b), (c), or (e); and
- (g) a polynucleotide comprising at least 50 contiguous nucleotides from a polynucleotide of (a), (b), (c), (d), (e), or (f).
- 20 2. A recombinant expression cassette, comprising a member of claim 1 operably linked, in sense or anti-sense orientation, to a promoter.
- 25 3. A host cell comprising the recombinant expression cassette of claim 2.
- Sub 01* 4. A transgenic plant comprising a recombinant expression cassette of claim 2.
- 30 5. The transgenic plant of claim 4, wherein said plant is a monocot.

6. The transgenic plant of claim 4, wherein said plant is selected from the group consisting of: maize, soybean, sunflower, sorghum, canola, wheat, alfalfa, cotton, rice, barley, and millet.

5           7. A transgenic seed from the transgenic plant of claim 4.

*Sub  
as* 8. A method of modulating the level of nitrate-responsive root transcriptional factor in a plant, comprising:

- 10           (a) introducing into a plant cell a recombinant expression cassette comprising a root transcriptional factor polynucleotide of claim 1 operably linked to a promoter;
- 15           (b) culturing the plant cell under plant cell growing conditions;
- (c) regenerating a plant from said plant cell; and
- (d) inducing expression of said polynucleotide for a time sufficient to modulate the level of nitrate-responsive root transcriptional factor in said plant.

15           9. The method of claim 8, wherein the plant is maize.

20           10. An isolated protein comprising a member selected from the group consisting of:

25           (a) a polypeptide of at least 20 contiguous amino acids from a polypeptide of SEQ ID NQ: 2;

              (b) a polypeptide of SEQ ID NO: 2;

              (c) a polypeptide having at least 75% sequence identity to, and having at least one epitope in common with, a polypeptide of SEQ ID NO: 2, wherein said sequence identity is determined by the GAP algorithm under default parameters; and,

              (d) at least one polypeptide encoded by a member of claim 1.
